

Better QA, A Runway to Success Advantages in outsourcing QA process

Outsourcing your software testing allows you to perform a thorough review of your code, by professionals skilled in the exact tools and technologies needed, while also enabling you to deliver your product/application ahead of schedule and under cost, in many cases.

Software Testing with Harrier

Harrier will dedicate a team for your testing project onsite at your facility or through our offshore facilities in Nagpur, India. Our dedicated testing teams can work on site or offshore at our state-of-the-art development centre equipped with the latest in communication and computing technologies.

The biggest threat for a software vendor is that the product you just launched was infected with errors or, that a mission critical application in which you have devoted a great deal of investment cannot perform as desired. Hence the testing of the product is equally important as the development. The difficulty in testing is to know what to test and finding skilled professionals with the expertise required for your project.

Challenges Faced By Organizations in QA/testing

IT Issues

In the Dynamic world of IT, Businesses are increasing the amount of IT applications at work, and each new component adds complexity and increases the chance of failure. Hence, handling QA as a separate department becomes more complex and challenging. At the same time, Extra costs on QA, may leverage burdens on management.

Costs

A separate QA department requires management, staff, equipments, tools, which incurs a lot of resources. These costs make an organization to think twice, before establishing a separate QA Department.

The Advantages of Outsourcing Software Testing to Harrier

- Unbiased and Independent assessment
- Process compliant with ISO standards
- Expertise using a variety of testing tools
- Effective Testing Methodologies
- Professional, Experienced Testers and Managers
- Reduced Development Time
- Reduced Development Costs

Expertise

The most important aspect of testing is that it must be properly carried out. A test plan must be developed and executed perfectly in order to be assured that a Product/application is reliable. Harrier has a wide range of expertise in developing applications and testing. Our teams are made up of professionals who have a number of years experience in the field and are up to date with the latest tools and technologies available.
